- 328 • Vitreous lining
- 343 • Liner 75/100°
- 351 • PVC reinforced 150/100° liner
- 353 • Liners: Others qualities
- 355 • Liner accessories
- 358 • Steps units

## VITREOUS LINING

### Model: SMOOTH

Degraded model using these five colours:

POSITIONS:

A: White - B: Pool Blue - C: Bright Blue - D: Standard Blue - E: Dark Blue.

#### CUSTOM MADE DEGRADED

Indicate dimensions to recover and the selection of colours to combine for obtaining your customised area.

Check with your distributor.

Pressed and later cooked Vitreous mosaic.

Developed and designed to resist chemical products, frost, stain and other hard weather conditions.

Due to its unalterability, easy clean and installation it is an optimum alternative to recover pools, wellness or outdoor-indoor decoration.

**VITREOUS LINING**

**Model: STANDARD MOSAIC DESIGNS**

Pressed and later cooked vitreous mosaic.

Developed and designed to resist chemical products, frost, stain and other hard weather conditions.

Due to its unalterability, easy clean and installation it is an optimum alternative to recover pools, wellness or outdoor-indoor decoration.

## PLASTIC RIGID RESIN TILES "PLAKIT"

### Plastic pool tiles

Plastic resin tiles, supplied in 330 mm x 330 mm sheets. Lightweight for transport. Highly flexible for easy application on curved surfaces. Easy to apply with time saving during the cladding process. The tile sheets are pushed with the hands into the water proof cement (white glue cement of 450 or 350 kp), and the excess is simply wiped off. Colour stabilised, resistant to UV light & frost. Also available in a range of patterns & tile bands. 90 sheets are required to cover 10 m<sup>2</sup> surface. Fast installation and very light for handling.

**LINER 75/100°**

**Pool liner 75/100°**

Ideal for residential pools. Manufactured in reinforced PVC-P, this material is the most used for lining pools thanks to enhanced malleability, resistance to tearing, ease of welding, resistance to discoloration by UV rays and with a wide range of available colours.

Made-to-measure liners are put together by high frequency welding machines at our facilities. Perfectly adaptable to any pool design or shape, with excellent watertight features, so you can forget about annoying leaks.

**Liner characteristics:**

- Manufactured in PVC. We use a fully recyclable polymer made from petroleum and sodium chloride.
- Chemical and mechanical properties are provided by additives that comply with international standards and the Manufacturer's Letter of Commitment. The use of cadmium compounds is currently forbidden and, in 2010, lead-based compounds will be forbidden.
- PVC does not release dioxins into the atmosphere and can be recycled by means of Lindell type degasification. Pool liner is normally reused for technical floor construction
- Resistant and watertight. AstralPool liner is manufactured from highly resistant PVC (0.75 mm thick) that ensures total watertightness for your pool.
- Smooth and pleasant to touch, it is easy to maintain and durable.
- Highly flexible and adaptable.
- Highly resistant to impacts and tearing.

**STANDARD LINER CALCULATION METHOD**

**RECTANGULAR SHAPE, FLAT FLOOR**

Floor surface = length (L) x width (l)  
 Wall surface = (L + L + l + l) x wall height (h)  
 Total area = Floor surface + Wall surface

**EXAMPLE:**

10 x 5 m pool, with a vertical wall height = 1.5 m  
 Floor area = 10 x 5 = 50 m<sup>2</sup>  
 Wall area = (10 + 10 + 5 + 5) x 1.50 = 45 m<sup>2</sup>  
 Total area = 50 + 45 = 95 m<sup>2</sup>

**ROUND LINER POOL WITH FLAT FLOOR**

Floor area =  $\pi \times D^2/4$  ( $\pi = 3.14$ )  
 Wall area = diameter (D) x 3.14 x wall height (h)  
 Total area = Floor surface + Wall surface

**EXAMPLE:**

Diameter 6 m round with a wall height of 1.2 m  
 Floor area =  $\pi \times 6^2/4 = 28.3$  m<sup>2</sup>  
 Wall area = (6 x 3.14) x 1.20 = 22.60 m<sup>2</sup>  
 Total area = 28.3 + 22.60 = approx. 50.9 m<sup>2</sup>

For round pools with conic floor you can calculate as flan floors and appliccate 1.30 coefficient.

**RECTANGULAR SHAPE, PYRMIDAL FRUSTUM FLOOR**

Floor area = length (L) x width (l) x 1.30  
 Wall area = (L + L + l + l) x height of the vertical wall. (h)  
 Total area = Floor surface + Wall surface

**EXAMPLE:**

10 x 5 m pool with a vertical wall height of 1.2 m  
 Floor area = 10 x 5 x 1.30 = 65 m<sup>2</sup>  
 Wall area = (10 + 10 + 5 + 5) x 1.20 = 36 m<sup>2</sup>  
 Total area = 65 + 36 = 101 m<sup>2</sup>

**RECTANGULAR SHAPE, COMPOUND INCLINATION OR CONTINOUS INCLINATION**

Floor surface = length (L) x width (l)  
 Wall surface = (L + L + l + l) x average height (h1 + h2):2  
 Total area = Floor surface + wall surface

**EXAMPLE:**

10 x 5 m pool, with a depth of 1.8 m at its deepest part  
 Floor area = 10 x 5 = 50 m<sup>2</sup>  
 Wall area = (10 + 10 + 5 + 5) x ((1.10 + 1.80):2) = 43.50 m<sup>2</sup>  
 Total area = 50 + 43.5 = approx. 94 m<sup>2</sup>

## STANDARD LINER CALCULATION METHOD

### LAZY SHAPE

Floor area = Length  $(L1 + L2)$  x longer width  $(I1)$  x 1.30

(Do not multiply by 1.30 if the pool floor does not have a pyramid shape)

Wall shape =  $((L1 + L2 + L3 + L4) + (I1 + I2))$  x wall height  $(h)$

(If the pool floor is inclined, multiply by the average height)

Total area = Floor area + wall shape

#### EXAMPLE:

Lazy pool with a pyramidal floor:

$L1 = 5$  m,  $L2 = 4$  m,  $L3 = 4$  m,  $L4 = 3$  m

$I1$  and  $I2 = 4$  m,  $h = 1.20$  m,

Floor area =  $(5 + 4) \times 4 \times 1.30 = 46.80$  m<sup>2</sup>

Wall shape =  $((5 + 4 + 4 + 3) + (4 + 4)) \times 1.20 = 28.80$  m<sup>2</sup>

Total area =  $46.80 + 28.80 = \text{aprox. } 76$  m<sup>2</sup>

### POLYGONAL SHAPE

Floor area = (length  $(L)$  x width  $(I)$  x 1.30) +  $(A \times B)$

(Do not multiply by 1.30 if the pool floor does not have a pyramid shape)

Wall shape =  $(L + L + I + I + B + A)$  x wall height  $(h)$

(If the pool floor is inclined, multiply by the average height)

Total area = Floor surface + wall surface

#### EXAMPLE:

Polygonal shaped pool with a pyramidal floor:

Length = 10 m, width = 5 m,  $A = 3$  m,  $B = 1.5$  m, wall height = 1.10 m

Pool floor area =  $(10 \times 5 \times 1.30) + (3 \times 1.50) = 69.50$  m<sup>2</sup>

Superficie de pared =  $(10 + 10 + 5 + 5 + 1.50 + 1.50) \times 1.10 = 36.30$  m<sup>2</sup>

Total area =  $69.50 + 36.30 = \text{aprox. } 106$  m<sup>2</sup>

### STAIRS ALONG THE ENTIRE POOL WIDTH

The stairs should not be taken into account for calculating the liner m<sup>2</sup>

Add the steps depth for the entire pool side. (see sketch)

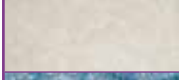

**LINER CLASSIFICATION ACCORDING TO POOL**

For free shape

**Pool triangulation**

Triangulation is the only reliable way to calculate pool dimensions, regardless of shape. Below we explain the steps to follow in order to obtain exact measurements and pool shape.

Imagine a straight line alongside the pool. Mark the ends point A and point B. The straight line must be at least one meter from the pool.

Space the distance indicators every 50 cm and number them as follows: 1, 2, 3, etc. until the entire edge of the pool has been covered.

Starting at point A, measure the distance in a straight line from each point marked by a number (e.g. distance from A to 1, from A to 2 and so on).

Do as before from point B.

If the pool is not completely round and forms small angles, it is essential you add a point (See example drawing).

When the curves are small, the distance between the points must be reduced so that a minimum of 3 points per arc of circle is obtained.

To measure non-geometric steps, place A and B at the base of the steps and proceed as for the triangulation of a free form pool.

## LINERS FOR STEPS

For steps that do not fit the Standard models shown here, request quote.

Below we provide you with the details of the shapes and models you can choose from plain or printed liners to ensure you select the correct liner for your pool steps. Steps that are fitted along the breadth of the basin are invoiced in accordance with the standard model RECTA, as long as the width does not exceed 4 meters. **Attention:** the size of the basin should not include the depth of the steps.

**PVC REINFORCED 150/100° LINER**

Note: Colours in the catalogue are approximate.

**Liner 150/100°**

Liner 150/100 (1.5 mm thick) is made of two PVC films laminated together and reinforced with fibreglass. This makes it particularly suited for public pools or other commercial applications.

In the case of liner 150/100, it is not supplied welded ready for installation in the pool. It comes in 1.65 m wide x 25.2 m rolls and must be welded on site by a skilled technician.

**Liner specifications:**

- Ideal for replacing pool lining because of easy installation and low cost in comparison with replacing tiles or standard cladding.
- Ensures total watertightness in odd shaped pools or pools with numerous steps.
- Compatible with concrete, prefabricated or steel panel pools. Can also be installed in pools with overflow.

1.-Inner frame of polyester weft  
2.- Highly resistant PVC

**Potable quality.**

	Code	Standard Packing	Standard Weight kg.	Standard Volume m <sup>3</sup>
Grey liner. Dimensions: 20 m x 2 m	25751	-	-	-

Supplied in rolls.

## LINER INSTALLATION AND FIXING

### Liner installation

Before laying the liner in the pool, we must bear in mind certain basic factors to ensure good and long lasting life. The floor or surface where the liner is to be laid:

- Must be permeable to ensure removal of condensed water.
- Must be completely smooth to prevent deterioration.
- Must also be free from any material that is incompatible with the membrane: for flexible PVC, avoid using rubber, paint, inks, tar or adhesive materials.
- Must be clean and dry.
- If a separating layer has been used, it must be rot-proof (protection filter).
- Only use bonding products recommended by AstralPool.
- PVC liners have an expansion coefficient of around 0.2% per 10°C. You are recommended to lay the liner at temperatures between 10°C and 25°C.

### Fastening system

#### HUNG TYPE FASTENING

The fastening system varies depending on whether the liner is to be laid in a pool already built or one yet to be built.

In both cases the fastening is compatible for liners of **75/100** and **150/100**.

#### OVERLAP TYPE FASTENING

#### V TYPE FASTENING

These are the simplest fastening systems and they have basically been designed for above ground pools steel sheet for home use, requiring a **75/100 liner**. Quick and easy to install, these systems are ideal for liner installation in pools.

### LINER FIXING MODIFICATION

If the standard Hung system is substituted by the Overlap or "V" type, neither the calculations nor the price of the liner m<sup>2</sup> will vary with respect to the standard calculations.

**LINER ACCESSORIES**
**Fastening accessories for liners 75/100° for pools under construction**

<b>27127</b>	1	-	-

**Code 05799**

**Code 27127**

Other models and colours, on request

## CONDITIONS FOR ACCEPTING AN ORDER

### Order:

All orders or enquiries for modifying orders must be made in writing. For avoiding any delay, the client, at his own risk, must forward the supplier all the necessary liner measurements for executing the work. In case the information supplied by the client is insufficient, he will have to supply the missing information ahead of the manufacturing time.

### Implicit data:

In cases certain information is not supplied in time, we shall consider the below mentioned data for the liner manufacture:

- \* Vertical radii: 15 cm
- \* Horizontal radii: max. 5 cm (only in pool basin). Holdingsystem, Hung system.
- \* Horizontal measurements taken on the basin floor.
- \* The depth measurement taken from under the coping stone till the wall touching the floor.
- \* The diagonals will be measured from the corner angles and not along the curves.

To avoid certain misunderstandings, we suggest you taking the following precautions:

- |                        |   |
|------------------------|---|
| For holding the liner: | * Specify the type (Hung, Overlap or in V); We leave 15 cm of extra liner length in height for the Overlap holding system.  |
| For steps:             | <ul style="list-style-type: none"> <li>* Check whether the angles between the step tread and rise (flat and vertical step surfaces) are really found in a straight line.</li> <li>* Installation of a discharge nozzle in the middle of the first step is highly recommended for holding the liner in place.</li> <li>* At least 30 cm of water should be left in the pool for maintaining the first step.</li> <li>* Avoid designing staircases having more than 5 steps.</li> <li>* For confirming dimensions, give the lengths of each step.</li> <li>* Check the verticality of pool walls. In case of deficient plumbness, enquire about the order viability.</li> <li>* Compound inclination safety ledges should be avoided on the liner.</li> </ul> |

### Taking measurements:

- \* Give the total length and width.
- \* Pool depths.
- \* Safety ledge width on each side.
- \* Specify the peripheral size on each side.
- \* Measurements of each corner, edge and inclination.
- \* All dimensions should be indicated with horizontal and/or vertical measurements.

### If angles are not straight:

- \* Measure all the diagonals from one point.
- \* Diagonals (hypotenuse) of right angles are not necessary, only the irregular angles other than the 90°.

### Definition of arcs of circles:

- \* Arcs of circles are defined by their radii.
- \* If a radius cannot be defined, a radius gauge should be supplied or a triangulation to define it.
- \* Ellipses are defined by gauges (or grid drawing with approximate 1 meter intervals)

### Sectional views:

- \* Three view plans should be submitted: top view, front view and lateral view.

### Full size pattern:

- \* Define the pattern, one side sky and the other side water (or a plan).
- \* The patterns are for the pool basin dimensions or for the covers.

### Shuttering:

- \* Specify shuttering dimensions according to the drawings.
- \* Check that inside shuttering angles are in a straight line.
- \* Check that vertical pool basin angles shuttering are in a straight line.
- \* Check that the horizontal angle of the wall and shuttering are in a straight line.
